- People with eligible medical conditions (see the table below)
- All people aged 65 years and older

2024 INFLUENZA VACCINES

AGE GROUP	Fluarix [®] Tetra (GSK)	Vaxigrip [®] Tetra (Sanofi)	Flucelvax [®] Quad (Seqirus)	Fluad [®] Quad (Seqirus)	Comments
6 MONTHS TO < 5 YEARS					<ul style="list-style-type: none"> • Influenza vaccines are not recommended for infants less than 6 months of age • Children aged 6 months to less than 9 years receiving the influenza vaccine for the first time require two doses at least 4 weeks apart • Influenza vaccines can be co-administered (given on the same day) with other vaccines*
5 YEARS TO < 65 YEARS	✓	✓	✓		
65 YEARS AND OLDER				✓	

*There is limited safety data for the co-administration of Fluad Quad and Shingrix. While it is preferred to separate administration by a few days, it is acceptable to co-administer these vaccines to avoid missing opportunities to vaccinate eligible people.
