

About the Dave Burrows Walk

This gentle walk meanders through woodland and coastal scrub with the path coming close to the mudflats and saltmarsh where many wading birds can be seen at low tide.

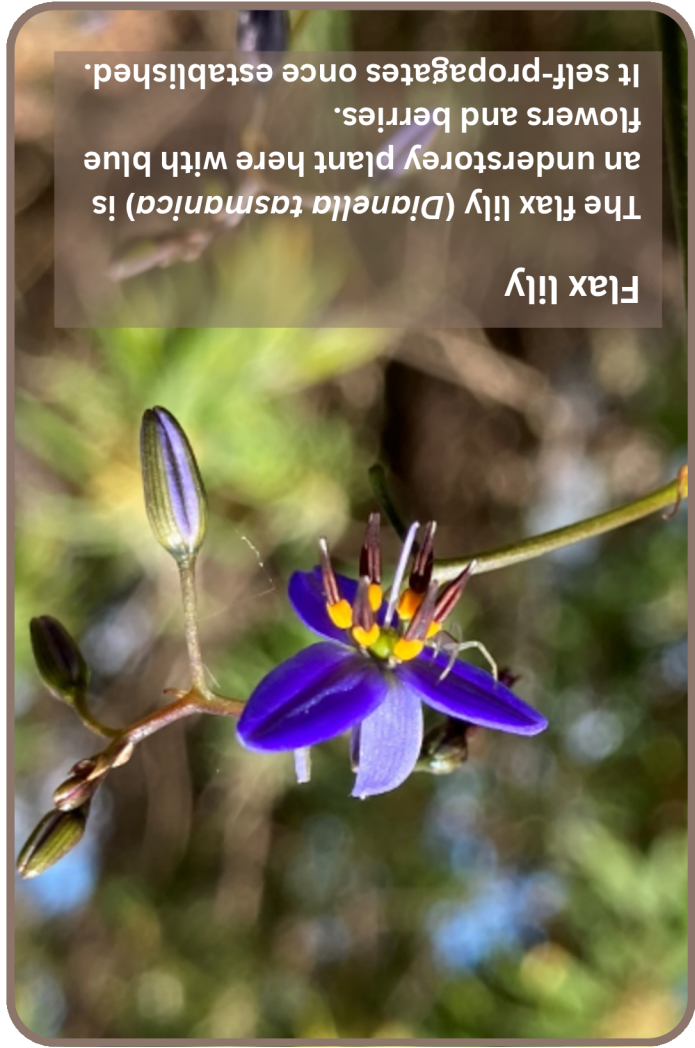

The area has been rehabilitated by the local landcare group and is now a healthy strip of coastal habitat populated by many woodland birds and animals.

There are good views of North West Bay along the track with several well positioned seats.

A FOCUS ON
Dave Burrows Walk
Kingborough

Flax lily
The flax lily (*Dianella tasmanica*) is an understory plant here with blue flowers and berries.
It self-propagates once established.

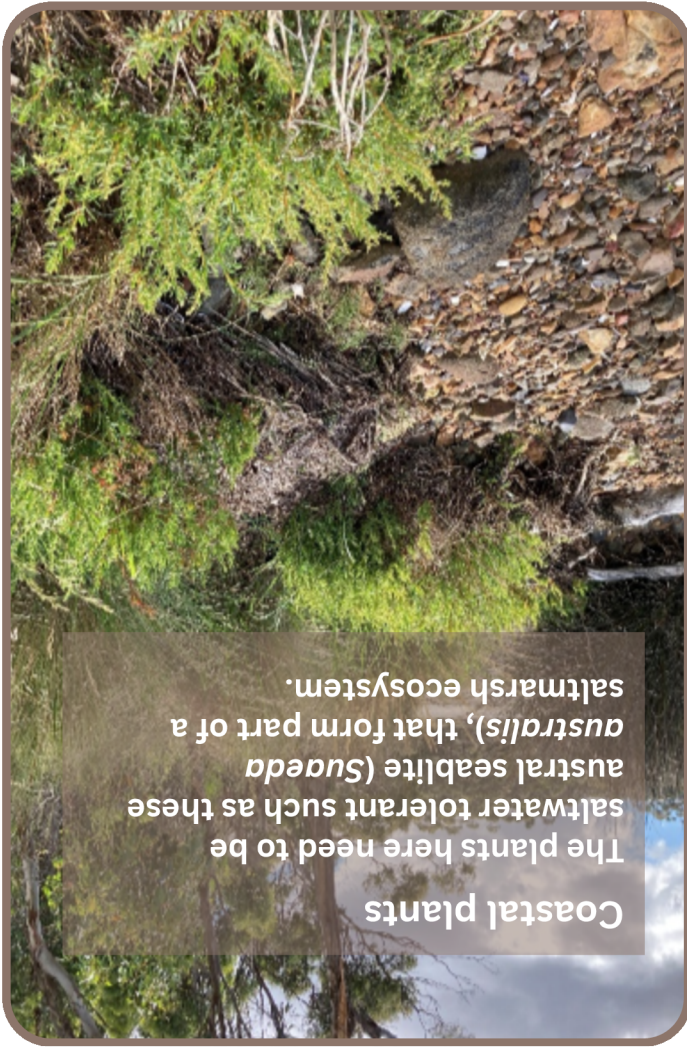

Prickly box
Prickly box (*Bursaria spinosa*) flowers at the end of summer in a spectacular fashion.

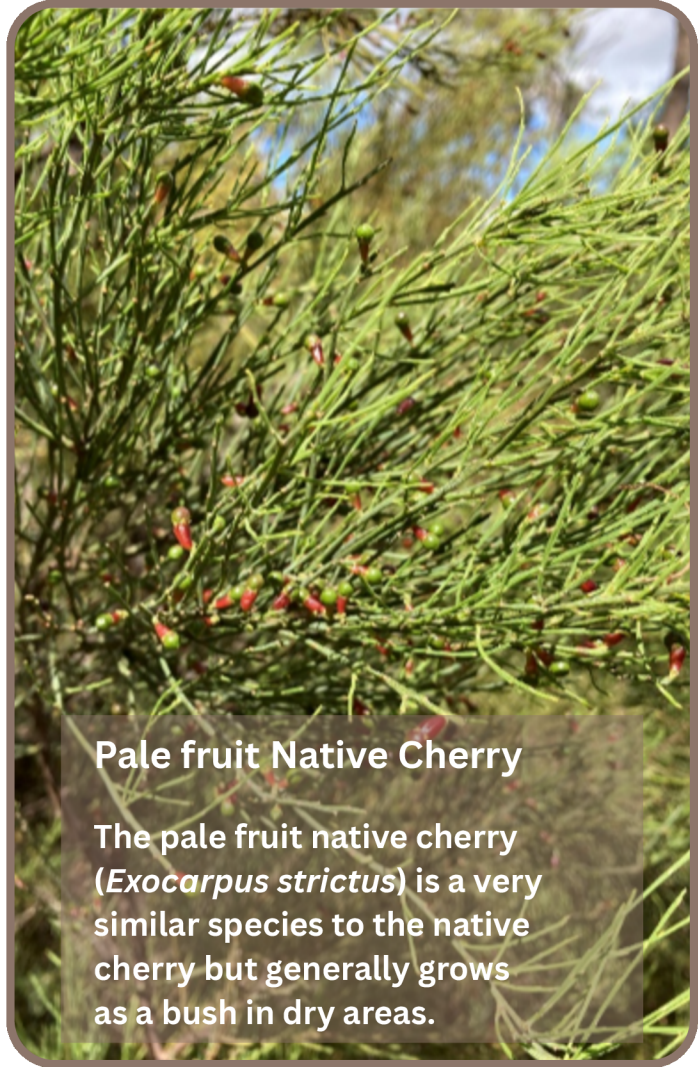

Coastal speargrass
Coastal speargrass (*Austrostipa* sp.) is a common coastal grass. Native grasses provide excellent habitat for bandicoots.

Coastal plants
The plants here need to be saltwater tolerant such as these austral seablite (*Suaeda australis*), that form part of a saltmarsh ecosystem.

A close-up photograph of a Pale fruit Native Cherry (Exocarpus strictus) bush. The plant has thin, green, needle-like leaves and small, pale red fruits hanging from the branches.

Pale fruit Native Cherry

The pale fruit native cherry (*Exocarpus strictus*) is a very similar species to the native cherry but generally grows as a bush in dry areas.

A close-up photograph of a Hopbush (Dodonaea viscosa) shrub. The plant has dark green, rounded leaves and clusters of small, dark red flowers.

Hopbush

The seeds of the hopbush (*Dodonaea viscosa*) shrub can be quite stunning in shades from dark red to green.

This plant can be trimmed into topiary.

A close-up photograph of a Hop native primrose (Goodenia ovata) plant. The plant has green, serrated leaves and bright yellow flowers.

Hop native primrose

Hop native primrose (*Goodenia ovata*) flowers can persist into autumn bringing a flash of cheerful yellow. A great hardy garden plant as well.

A photograph of a dirt path leading through a wooded area towards a body of water. The path is flanked by trees and shrubs, and a fence is visible in the distance.

The Derwent Avenue Group (DAGs)

The walk and surrounds are cared for by a community landcare group who have been controlling weeds and replanting with native plants for over 20 years.

A photograph of a Prickly moses (Acacia verticilata) plant. The plant has green, needle-like leaves and small, yellow flowers. It is growing in a dry, open area.

Prickly moses

Prickly moses (*Acacia verticilata*). A species of wattle names for the wheel like arrangement of its leaves.

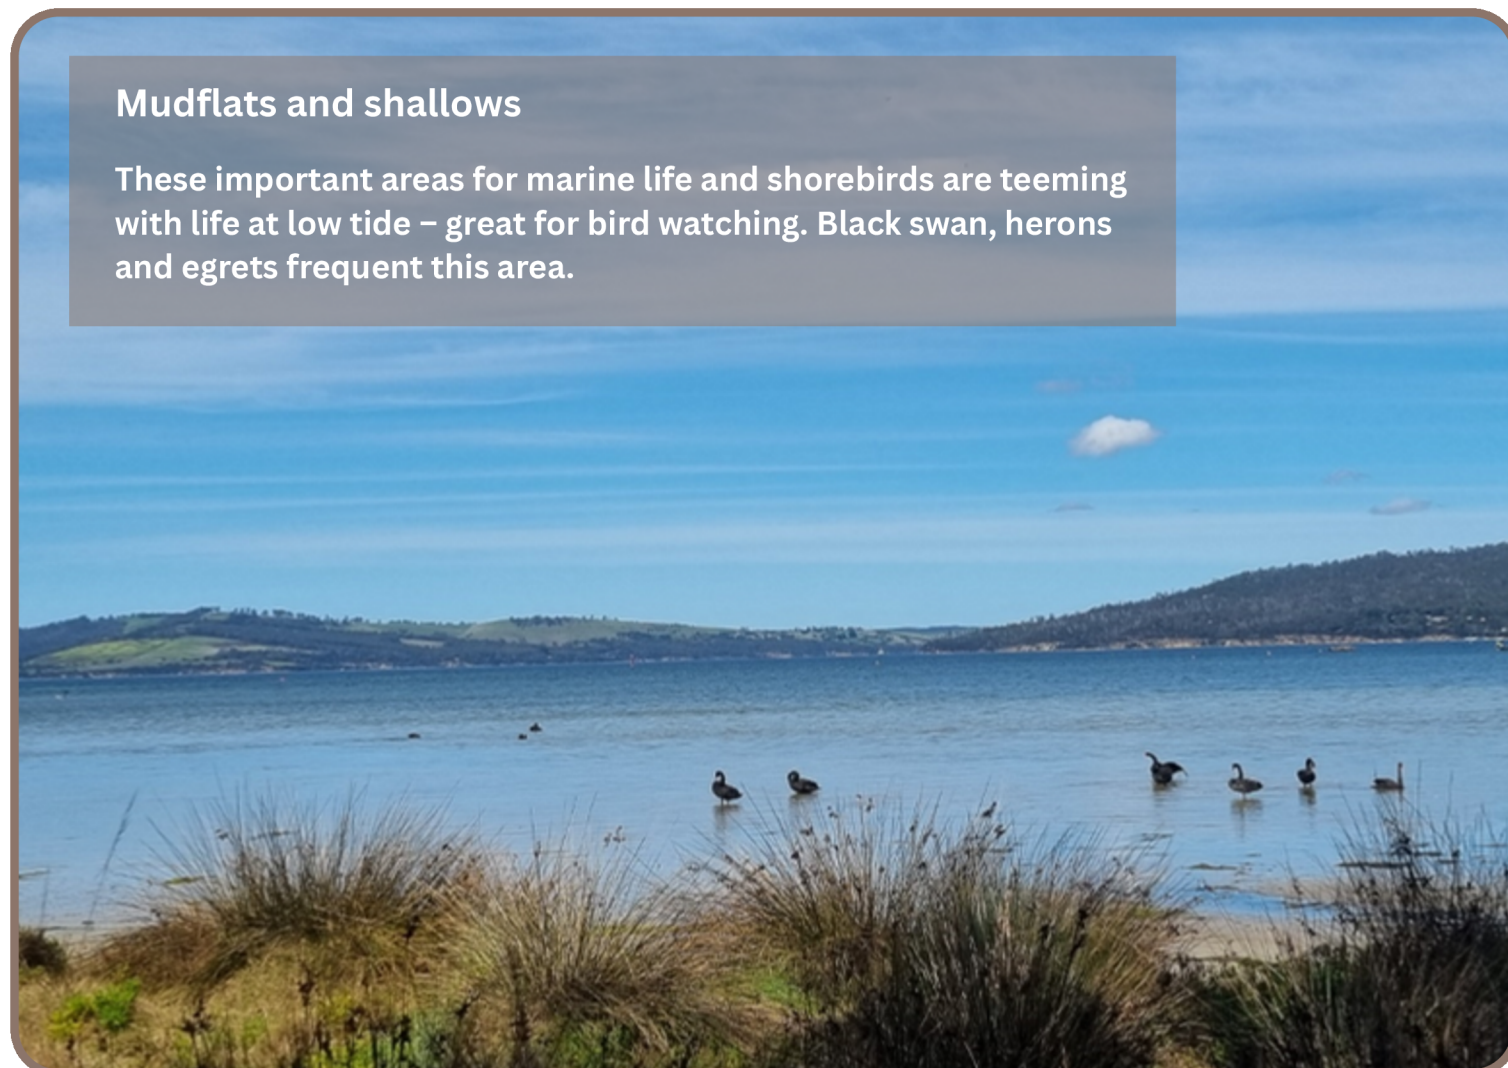

Delicate yellow flowers in Spring.

A close-up photograph of a Prickly beauty (Pultenaea juniperina) plant. The plant has green, needle-like leaves and bright yellow flowers.

Prickly beauty

Prickly beauty (*Pultenaea juniperina*) is a wonderful colourful plant, sometimes known as eggs and bacon.

Great for small birds and insects.

A wide photograph of a coastal area at low tide. The foreground is covered in tall, dry grasses. In the middle ground, several black swans are swimming in the shallow water. The background shows a blue sky and distant hills.

Mudflats and shallows

These important areas for marine life and shorebirds are teeming with life at low tide – great for bird watching. Black swan, herons and egrets frequent this area.
